MEDICAL CARE SERVICES IN NORTH CAROLINAFACTUAL SUMMARYShortage of Doctors

North Carolina has normally 2,300 active doctors, but 1,300 additional doctors are needed to provide at least one doctor for each 1,000 people.

All of the 1,300 additional doctors are needed in rural areas. Only 31 per cent of our doctors live in rural areas, but 73 per cent of our population is rural. Cities above 10,000 in population with only one-fifth of the state's population have one-half of our doctors. (See pages 8 and 38)

There are only 144 Negro doctors in the state to serve a million Negro people. Assuming that Negro doctors should serve Negro people, we need about 850 additional Negro doctors. (See pages 12 and 40)

The number of rural doctors is declining. In 1914, there were 1,125 doctors living in rural areas of the state, but by 1940 we had only 719 rural doctors. The number of rural people per physician went up from 1,678 in 1914 to 3,613 in 1940. (See page 76)

The number of doctors above 55 years of age, in the state as a whole, has gone up from 15.6 per cent in 1914 to 32.0 per cent in 1940. In rural areas the per cent of doctors above 55 years of age went up from 14.6 in 1914 to 37.5 in 1940. (See page 74)

In number of doctors per 100,000 population, North Carolina ranks 45th in the nation. The three states having relatively fewer doctors are Alabama, South Carolina, and Mississippi. (See page 8)

Inadequate Hospital Facilities

The modern doctor requires hospital facilities and the young doctors are setting up practice in the larger centers where adequate hospital facilities are available.

North Carolina has 128 general hospitals, containing 8,475 beds. In order to bring the state average up to 4 beds per 1,000 population, 6,000 additional hospital beds are needed. (See page 34)

In 1940, North Carolina ranked 42nd among the states in hospital beds per 1,000 population. (See page 4)

Of the 8,475 general hospital beds, 41.7 per cent were located in the six largest urban counties of the state. (See page 34)

- 34 counties have no hospital beds
- 31 counties have less than two beds per 1,000 population
- 31 counties have from two to four beds per 1,000 population
- 4 counties have more than four beds per 1,000 population

372541

At least 20 of the 34 counties without hospitals are large enough to require a 50 bed hospital and all of the others are large enough for health clinics having from 10 to 25 beds. (See pages 34 and 62)

Some hospital expansion is needed in at least 62 additional counties which already have some facilities. Thus, 82 counties need either hospital expansion or new

ANNUAL SUMMARY

Shortage of Doctors

North Carolina has normally 2,300 active doctors, but 1,500 additional doctors are needed to provide at least one doctor for each 1,000 people.

All of the 1,500 additional doctors are needed in rural areas. Only 31 per cent of our doctors live in rural areas, but 73 per cent of our population is rural. Cities above 10,000 in population with only one-fifth of the state's population have one-half of our doctors. (See pages 8 and 33)

There are only 144 Negro doctors in the state to serve a million Negro people. Assuming that Negro doctors should serve Negro people, we need about 650 additional Negro doctors. (See pages 12 and 40)

The number of rural doctors is declining. In 1914, there were 1,125 doctors living in rural areas of the state, but by 1940 we had only 719 rural doctors. The number of rural people per physician went up from 1,378 in 1914 to 3,012 in 1940. (See page 78)

The number of doctors above 35 years of age, in the state as a whole, has gone up from 12.6 per cent in 1914 to 32.0 per cent in 1940. In rural areas the per cent of doctors above 35 years of age went up from 14.8 in 1914 to 37.5 in 1940. (See page 74)

In number of doctors per 100,000 population, North Carolina ranks 43rd in the nation. The three states having relatively fewer doctors are Alabama, South Carolina, and Mississippi. (See page 8)

Inadequate Hospital Facilities

The modern doctor requires hospital facilities and the young doctors are entering up practice in the larger centers where adequate hospital facilities are available.

North Carolina has 128 general hospitals, containing 8,475 beds. In order to bring the state average up to 4 beds per 1,000 population, 6,000 additional hospital beds are needed. (See page 34)

In 1940, North Carolina ranked 42nd among the states in hospital beds per 1,000 population. (See page 4)

Of the 8,475 general hospital beds, 41.7 per cent were located in the six largest urban counties of the state. (See page 34)

4 counties have more than four beds per 1,000 population
81 counties have from two to four beds per 1,000 population
81 counties have less than two beds per 1,000 population
84 counties have no hospital beds

At least 20 of the 34 counties without hospitals are large enough to require a hospital and all of the others are large enough for health clinics having from 10 to 25 beds. (See pages 34 and 35)

Some hospital expansion is needed in at least 32 additional counties which already have some facilities. Thus, 33 counties need either hospital expansion or new

37824

hospital facilities; and 14 small counties need small health clinics. Public health centers are needed in many other counties.

Negro hospital facilities are seriously inadequate. We have now 1,665 general hospital beds for Negroes and at least 2,450 more are needed to supply the recommended minimum of 4 beds per 1,000. (See page 37)

Poor Health Conditions

The result of inadequate facilities and personnel are poor medical care and poor health, as shown by the following facts:

Only 38.1 per cent of our babies are delivered in hospitals; 49.0 per cent of the white and only 13.6 per cent of the Negro. In this respect, the state ranks 40th. Only 17.1 per cent of all rural infants are delivered in hospitals. (See pages 16,18,44)

Six per cent of our white babies and 54 per cent of our Negro babies do not have a doctor attendant at birth. In this respect, the state ranks 40th. Twenty-five per cent of our rural babies have no doctor attending at birth. (See pages 20,22,46)

Five out of every 1,000 mothers die at child birth and the state ranks 41st on this score. The maternal mortality rate for rural mothers in 1940 was 4.9 and for Negroes 7.6 per 1,000 live births. Fortunately, we have a public health program which is helping to push this rate steadily downward. (See pages 24,56)

Our infant mortality rate is also declining, but North Carolina still ranks 38th in this respect. The number of infant deaths plus stillbirths per 1,000 births is 89 per 1,000: 74 for the white and 120 for the Negro. 7,404 infant deaths and stillbirths occurred in North Carolina in 1940. Good medical care could have prevented a substantial percentage of these. In some states and countries the infant mortality rate is less than half that of North Carolina. (See pages 26,52)

North Carolina, in 1943, led the nation in percentage of registrants rejected for military service. The percentage of rejections, from February through August of 1943, was:

56.8 % of all registrants
49.2 % of white registrants
71.5 % of Negro registrants

These data are not conclusive because if all registrants examined through March 31, 1944 are included the rejection rate for North Carolina is about 8 per cent lower.

However, in spite of the tentative character of the data, the facts do reveal many serious physical deficiencies, many of which could have been prevented if thorough physical examinations and needed corrections and treatments had been carried out at an early age. (See pages 12 A, 12 B, 60)

Economic and Social Factors

North Carolina has inadequate medical services because it is a poor and an agricultural state. Net income per capita in 1940 was only \$ 317 as compared with \$ 573 for the nation as a whole. In this respect, North Carolina ranks 44th! (See page 82)

The population side of the problem is correspondingly serious. Our birth rate is high; being 90 per 1,000 women 15-44 years of age as compared with 73.7 for

hospital facilities; and in small counties need small health clinics. Public health centers are needed in many other counties.

Neurological facilities are seriously inadequate. We have now 1,685 general hospital beds for Negroes and at least 2,480 more are needed to supply the recommended minimum of 4 beds per 1,000. (See page 37)

Other Health Conditions

The number of tuberculosis facilities and personnel are very small and poor health, as shown by the following facts:

Only 38.1 per cent of our babies are delivered in hospitals; 40.6 per cent of the white and only 15.6 per cent of the Negro. In this respect, the state ranks 40th. Only 15.1 per cent of all rural infants are delivered in hospitals. (See pages 18, 19, 20)

Six per cent of our white babies and 16 per cent of our Negro babies do not have a doctor attending at birth. In this respect, the state ranks 49th. Twenty-five per cent of our rural babies have no doctor attending at birth. (See pages 20, 21, 22)

Two out of every 1,000 babies die of child birth and the state ranks 45th in this respect. The maternal mortality rate for rural mothers in 1940 was 4.5 and for Negroes 7.6 per 1,000 live births. Unfortunately, we have a public health program which is helping to push this rate steadily downward. (See pages 24, 25)

Our infant mortality rate is also declining, but North Carolina still ranks 43rd in this respect. The number of infants under five years of age dying in 1940 was 59 per 1,000 for the white and 100 for the Negro. 5,404 infant deaths and stillbirths occurred in North Carolina in 1940. Good medical care could have prevented a substantial percentage of these. In some states and countries the infant mortality rate is less than half that of North Carolina. (See pages 26, 27)

North Carolina, in 1940, led the nation in percentage of population receiving for military service. The percentage of population with literacy through August 31, 1940, was:

- 56.6 % of all registrants
- 44.8 % of white registrants
- 21.8 % of Negro registrants

These facts are not conclusive because if all registrants examined through March 31, 1941 are included the literacy rate for North Carolina is about 5 per cent lower.

However, in spite of the tentative character of the data, the facts do reveal many serious physical deficiencies, many of which could have been prevented if thorough physical examinations and needed corrections and treatments had been carried out at an early age. (See page 18, 19, 20)

Economic and Social Factors

North Carolina has inadequate medical services because it is a poor and an agricultural state. Not income per capita in 1940 was only \$31.55 compared with \$73 for the nation as a whole. In this respect, North Carolina ranks 44th. (See page 32)

The population side of the problem is correspondingly serious. Our birth rate is high, being 50 per 1,000 women 15-44 years of age as compared with 27 for

the nation. We have more people per occupied dwelling as well as more farm people per square mile of farm land than any other state in the nation.

(See pages 81, 82)

The age distribution of our population is heavily weighted with children and old people. We have 585 children (under 15) and old persons (over 65) per 1,000 people 16-65 years of age. In this respect, we rank 43rd in the nation; the national average being 486 per 1,000. (See Page 81)

In all indexes of level of living, North Carolina is also quite deficient: 42nd in value of dwellings, 38th in homes with electricity, 41st in homes with radios and running water, and 42nd in per cent of adults with less than a fifth grade education. (See page 82)

In proportion to their ability to pay, and in proportion to the size of the medical care problem, the people of North Carolina working as individuals have gone about as far as they can go in helping themselves. Therefore, if the situation is to be improved to any great degree, group effort and public action on a state and national level will be necessary.

The medical care problem of the state is not a simple one. There are many deficiencies, and many reasons why these deficiencies exist. It is to a large degree a rural problem and a Negro problem.

The medical care problem as a whole has three aspects, all of which result in poor medical care. These aspects are:

- (1) Lack of medical care facilities and personnel
- (2) Lack of appreciation for the need of good medical care
- (3) The inability of rural people to pay for modern medical care

These are the three sides of the triangle: facilities, education, economics. No one phase of the problem can be considered without the other. The problem of rural medical care cannot be solved by only building hospitals, or by only educating the people to know the value of good facilities, or by only providing more convenient methods of payment. All three aspects of the problem must be worked on at once.

More rural physicians must be trained; more rural hospitals must be built; more educational and preventive work must be carried on; and more convenient methods of paying for medical care must be devised. The recommendations of the Governor's Commission on Hospital and Medical Care summarized below are designed to help meet these needs.

SUMMARY OF RECOMMENDATIONS OF THE COMMISSION ^{1/}

Meeting on October 11, 1944, the State Hospital and Medical Care Commission, after giving careful consideration to the reports of the various subcommittees and to the facts summarized in this report, made a series of recommendations which may be summarized as follows:

Medical School. That the two year medical school at the University of North Carolina be expanded into a four year school with a central hospital of 600 beds.

^{1/} The full report of the Commission Report, as well as other subcommittee reports, may be obtained by writing Dr. Clarence Poe, Chairman, Raleigh, N.C.

Loan Fund for Medical Students. That a loan fund be established by the state legislature, particularly for promising youth who wish to become physicians in North Carolina, with extra inducements for those who will agree to practice medicine at least four years in rural areas.

Medical Training for Negro Youth. That North Carolina consider the advisability of establishing, in cooperation with neighboring states, a regional medical school for Negroes.

New Hospitals and Health Centers. That the state legislature set up a \$ 5,000,000 fund to aid communities and counties to build new hospitals and health centers and to expand present facilities where needed. It is estimated that \$ 10,000,000 additional funds would be provided by other sources. Rural hospitals and health centers are emphasized.

Health Insurance and Prepayment Plans. That the state encourage in every practical way the development of group medical care plans; and that the Blue Cross plan be expanded to include the services of general practitioners and drugs.

Hospital Aid for Low Income Groups. That the state appropriate \$ 1 per day to help pay the hospital expenses of each indigent person treated, the remainder of the hospital cost to be paid by philanthropic agencies, such as the Duke Endowment, and by the counties and municipalities wherein the patients reside. It is estimated that this will cost the state about \$ 500,000 each year.

Public Health Program. Endorsed the proposal for a general examination of school children to discover remediable physical defects, such defects to be remedied at public expense in cases where parents are not financially able to pay for such treatment. Appropriations for public health work should be increased until the state has entirely adequate program for the prevention of disease, thus reducing needed hospital and medical care to the lowest practicable minimum.

State Hospital and Medical Care Council. That a State Hospital and Medical Care Council composed of qualified persons be set up to administer the proposed program, so that high standards of service, efficiency, economy, and professional excellence might be maintained. Administrative control of hospitals aided would, however, remain in the hands of properly constituted local boards or governmental units.

In concluding its report, the Commission took pains to point out that no claim was made that the proposed program was complete or perfect. Much remains to be done, but a substantial beginning has been made toward the ultimate goal set forth by Governor Broughton,

".....that no person in North Carolina shall lack adequate hospital care or medical treatment by reason of poverty or low income."

MEDICAL CARE SERVICES IN NORTH CAROLINA

Foreword

In February 1944, Governor J. Melville Broughton appointed a State Hospital and Medical Care Commission to survey the hospital and medical care needs of our state and to recommend a program to the people and to the legislature of North Carolina. Dr. Clarence Poe was appointed Chairman of the Commission and Dr. Carl V. Reynolds, Secretary. Several sub-committees were appointed.

The sub-committee on Statistical Data and Publications, which was responsible for preparing this report, was composed of the following persons: C. Horace Hamilton, Head, Department of Rural Sociology, North Carolina State College, Chairman; S. H. Hobbs, Professor, Rural Social Economics, University of North Carolina; R. T. Stimson, M. D., Director, Division of Vital Statistics, North Carolina State Board of Health. Dr. W. S. Rankin of the Duke Endowment could not serve as a member of the committee, but rendered great service in making available the Duke Hospital statistics.

Arrangement of Data

These data are arranged first, to show how North Carolina stands in the nation; and second, how the counties stand in the state with regard to hospital and medical care services, health conditions, and social and economic factors affecting health and medical care.

Practically every table is illustrated with a chart: the table being on the left side facing the chart. This arrangement facilitates study of both the charts and the statistical data.

Wherever available, the data show white and nonwhite, rural and urban comparisons. Most of the data apply to 1940 except where otherwise stated.

Acknowledgements

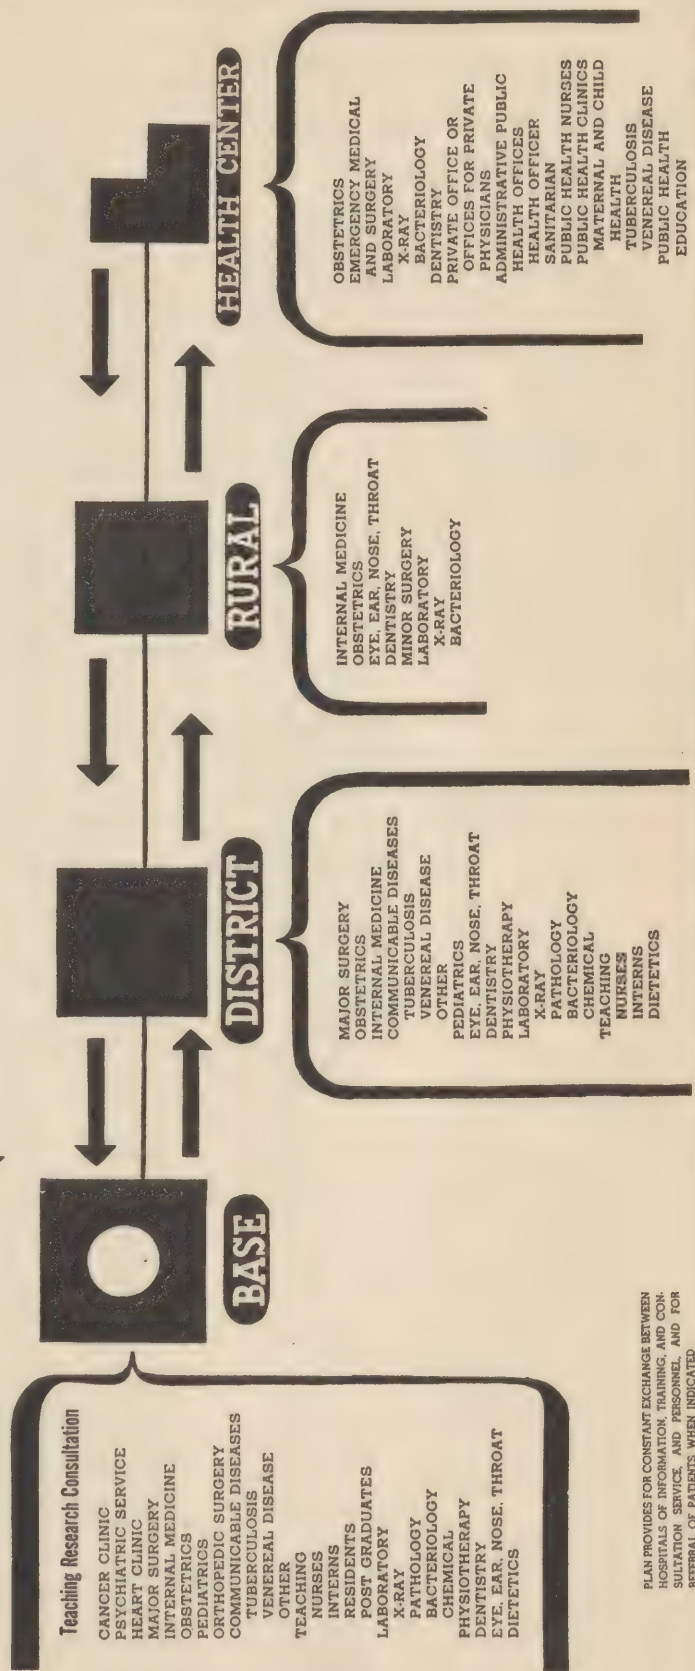

The committee acknowledges with much appreciation the assistance of the following members of the North Carolina Department of Rural Sociology, who worked faithfully and carefully in assembling the data and in making the maps and charts: Dr. Selz C. Mayo, Miss Margaret Cole, Mrs. Rosemary Vaughan, and Martin R. Chambers.

PERCENTAGE OF REGISTRANTS REJECTED FOR MILITARY SERVICE

1. *Chlorophyll a* (Chl *a*)

Limitations of Selective Service Data

The data on Selective Service rejections are not only of a preliminary character but are subject to other limitations. Col. Leonard G. Rowntree, Chief of the Medical Division, National Headquarters, Selective Service System, has the following to say about rejection rates:

"It is important to remember that, so far, the discussion has dwelt only on primary defects, i.e., the principal cause of rejection.

Rejection rates based upon the number of registrants rejected for military service per 1,000 men examined have limitation in their use as criteria of good civilian health. Rejection rates are dependent upon too many factors, as for instance (1) changes in standards for induction, (2) changing deferment policies, (3) varying numbers of registrants by age, race, urban-rural areas all of which introduce variables correctable only through the calculation of specific rejection rates, (4) whether a registrant is coming up for the first, second, third, or fourth examination and (5) how far military standards exceed those required of normal civilian living. Selective Service therefore regards the rejection rate per 1,000 examined as useful in measuring the Nation's health only in terms of the limitations placed upon such rates....." 1/

These data published herewith are preliminary and are of limited scientific value because they apply to a very short period of time - February through August 1943. The table on page 60 of this publication which shows the North Carolina rejection rate to be only 48.1 per cent, was based on a sample of all data available from the beginning of this war through March 1943. Obviously, the rejection rate must have risen considerably after March. Perhaps there were many 4-F's coming up for the second and third examinations.

Until more complete data become available, we can not be sure as to the significance and importance of Selective Service rejection rates.

There was no full-time public health service in the following counties during the fiscal year 1943-1944:

Alexander
Brunswick
Caswell
Henderson
Jones
Lee

McDowell
Madison
Mitchell
Pamlico
Warren

* Other agencies include:

Reynolds Funds- Special from Smith Reynolds Foundation
Federal Venereal Disease Control Funds
Title VI (Federal)
Children's Bureau (Federal)

** Winston-Salem uses no State or Federal Funds

The following table shows the results of the experiments conducted on the 10th of January 1881. The experiments were conducted in the presence of the following gentlemen: Mr. J. H. ... Mr. J. H. ... Mr. J. H. ...

Experiment 1			
Time	10.00	10.05	10.10
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 2			
Time	10.15	10.20	10.25
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 3			
Time	10.30	10.35	10.40
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 4			
Time	10.45	10.50	10.55
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 5			
Time	11.00	11.05	11.10
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 6			
Time	11.15	11.20	11.25
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 7			
Time	11.30	11.35	11.40
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 8			
Time	11.45	11.50	11.55
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 9			
Time	12.00	12.05	12.10
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60
Experiment 10			
Time	12.15	12.20	12.25
Temperature	20.0	20.5	21.0
Pressure	760	760	760
Humidity	60	60	60

The results of the experiments show that the temperature of the air increases as the pressure increases. This is in accordance with the law of Charles and Gay-Lussac. The pressure of the air also increases as the temperature increases. This is in accordance with the law of Boyle and Mariotte. The humidity of the air remains constant throughout the experiments.

The experiments were conducted in the presence of the following gentlemen: Mr. J. H. ... Mr. J. H. ... Mr. J. H. ...

HOW NORTH CAROLINA RANKS IN HEALTH AND MEDICAL CARE AND IN SOCIAL AND ECONOMIC CONDITIONS AFFECTING HEALTH

Explanatory Note

On the following three pages there is a summary table showing how North Carolina ranks in the nation with regard to many subjects covered in this report. In most cases the rank order is obvious but in other cases this is not so. This explanation will, it is hoped, clear up any confusion which may have arisen.

In general, the most disadvantaged state is given a rank of "48" and the least disadvantaged state a rank of "1". Some items, however, may be considered as disadvantaging in one respect and just the opposite in another respect. In such cases, the rank order used may be determined by comparing the average for North Carolina with that for the United States.

For instance, the birth rate of North Carolina is higher than the average for the nation and North Carolina ranks 14th, meaning that there are 13 states with higher birth rates. Some people may feel that a high birth rate is a "bad" or "disadvantaging" condition, as indeed it may be if one is thinking of infant mortality or possibly the size of our child health problem. However, there are many reasons for holding that a high birth rate is a "good" thing, particularly because a decreasing birth rate is now considered as a threat to national survival. Be that as it may, the order of ranking is more or less obvious.

In the case of "farm people per square mile" the rank order could just as well have been reversed, because the more densely settled an area is, the more economically can medical care services be provided. Yet the fact that "over-population" may indicate conditions leading to poor health justifies the rank order which we have used.

It may be said in conclusion that any rank order system must be used with caution. All states might be very similar, say within two or three per cent of each other, and yet the range of ranks would still be from "1" to "48". Also, a state might improve itself a great deal in some respect and yet keep the same rank order because some or all of the other states may also be improving themselves. Therefore, it is suggested that the reader, in addition to observing North Carolina's rank, note also the averages or percentages for both North Carolina and the United States.

HOW NORTH CAROLINA RANKS IN HEALTH AND MEDICAL CARE
AND IN SOCIAL AND ECONOMIC CONDITIONS AFFECTING HEALTH.*

Subjects	Average or Percentage		North Carolina rank
	United States	North Carolina	
<u>HEALTH AND MEDICAL CARE</u>			
Hospital beds per 10,000 population	35	23	42
Days hospitalization per 100 population	90	52	43
Doctors per 100,000 population	125	72	45
White doctors per 100,000 white population	136	94	41
Nonwhite doctors per 100,000 Nonwhite population	28	17	30
Dentists per 100,000 population	58	22	43
White dentists per 100,000 population	58	28	46
Nonwhite dentists per 100,000 nonwhite population	12	6	34
Nurses (including students) per 100,000 population	270	175	38
White nurses per 100,000 white population	295	226	30
Nonwhite nurses per 100,000 nonwhite population	54	46	25
Percentage live births in hospitals (1942)	67.9	38.1	41
Percentage white births in hospitals (1942)	72.7	49.0	41
Percentage Negro births in hospitals (1942)	28.9	13.6	43
Percentage urban (over 10,000) births in hospitals	80.5	55.9	44
Percentage rural (under 10,000) births in hospitals	36.5	17.1	39
Percentage of live births with no medical attendant (1942)	7.4	20.7	40
Percentage of white births with no medical attendant (1942)	2.5	6.1	40
Percentage of Negro births with no medical attendant (1942)	46.8	54.0	40
Percentage of urban births with no medical attendant (1942)	2.6	10.0	40
Percentage of rural births with no medical attendant (1942)	14.2	24.7	39
Maternal deaths per 1,000 live births	3.8	5.1	41
Rural maternal deaths per 1,000 live births	4.0	4.9	38
Nonwhite maternal deaths per 1,000 live births	7.7	7.6	31

SELECTED REFERENCES ON MEDICAL CARE PROBLEMS

A.M.A. MEDICAL SERVICE PLANS. Chicago: American Medical Association, Bureau of Medical Economics. 1943. P. 72. The American Medical Association expresses opposition to the inclusion of compulsory sickness insurance under the Social Security Bill. Statement of ten principles for guidance in setting up any medical care plan. Description of plans now in existence and a discussion on the Association's experience with prepayment plans.

A.M.A. GROUP MEDICAL PRACTICE. Chicago: American Medical Association, Bureau of Medical Economics. 1940. P. 70. Booklet attempts to define group medical practice. Gives historical development in the United States. Quotes from comments received from groups themselves as to advantages and disadvantages of such a set-up. No conclusion made for or against group practice as opposed to individual practice.

Amidon, Beulah. WHO CAN AFFORD HEALTH? New York: Public Affairs Committee, Inc., 1944. P. 31. Prepared on the basis of the National Health Survey made in 1935-36 by the United States Public Health Service and other government research projects. Stresses the relationship between income and amount of medical care needed and obtainable. Brief discussion of plans for meeting the problem.

Anderson, Elin L. "ADEQUATE MEDICAL CARE FOR RURAL FAMILIES." Journal of Home Economics, Vol.36, No.7, pp.397-400. September, 1944. Discussion of the need for medical care; summary of several plans now operated successfully; and conclusion as to what the next step must be.

Anderson, Elin L. et al. MEDICAL CARE AND HEALTH SERVICES FOR RURAL PEOPLE. Chicago: Farm Foundation. 1944. P 226. Report of the Farm Foundation Conference held at Chicago April 11-13, 1944. Summarizes discussion and presents detailed account of proceedings.

Atkinson, Miles. BEHIND THE MASK OF MEDICINE. New York: Charles Scribner's Sons. 1941. Pp. xiv + 348. A popular presentation of the history of medicine emphasizing the ethical and social problems involved. Has chapter on "Socialized Medicine." Outlines a general state plan and discusses difficulties and problems involved.

Bradbury, Samuel. THE COST OF ADEQUATE MEDICAL CARE. Chicago: The University of Chicago Press. 1937. Pp.ix + 86. Data collected by Lee and Jones used in the study of the cost of medical care today. Appendix contains statistical tables showing services required for various disease categories, disease expectancy by age groups, fee schedules, and more detailed information regarding costs of illness.

Bureau of Cooperative Medicine. NEW PLANS OF MEDICAL SERVICE. New York: 1940. P. 72. Gives thirty selected examples of organized local plans for providing or paying for medical services in the United States.

Canadian Federation of Agriculture. HEALTH ON THE MARCH. Toronto: January, 1943. P. 31. Part I contains principles for a plan of national health insurance which were presented to the Dominion Government by the Canadian Federation of Agriculture. Each principle followed by explanatory statements. Part II describes systems in other countries, some plans already in effect in Canada, and a brief picture of what the future should hold for Canadian citizens.

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation $f(x) = \int_0^x f(t) dt$. It is shown that the function $f(x)$ is continuous and differentiable on the interval $[0, 1]$ and that its derivative is equal to $f(x)$. This result is used to prove the existence and uniqueness of the solution of the initial value problem $y' = y$, $y(0) = 1$.

Committee on the Costs of Medical Care. MEDICAL CARE FOR THE AMERICAN PEOPLE. Chicago: The University of Chicago Press. 1932. Pp. xvi + 213. This report outlines the present situation, states the problem, presents the essentials of a satisfactory medical program, and shows how the latter can be put into practice. It describes plans already in use, discussing their advantages and disadvantages. Five broad recommendations are made followed by specific plans for their development, and the final chapter expresses the need for present action and gives practical steps to be taken at once.

Committee of Physicians for the Improvement of Medical Care, Inc. A SUMMARY AND CRITICAL ANALYSIS OF THE MEDICAL FEATURES OF THE WAGNER-MURRAY-DINGELL BILL. New Haven, Connecticut: December, 1943. This committee favors a National Health Insurance Program but is dissatisfied with some features of the Wagner-Murray-Dingell Bill. Suggestions are made for its improvement.

Committee on Research in Medical Economics. PRINCIPLES OF A NATION-WIDE HEALTH PROGRAM. New York: November, 1944. P. 34. "The health program presented here arises from the belief that there is now need for public action to make adequate medical care more widely accessible to the American people and to improve the quality, organization and economy of medical service."

CIO, Department of Education and Research. FOR THE NATION'S SECURITY. Washington, D.C., 1943. P. 32. Discussion of the things needed for security in the United States and the way in which the Wagner-Murray-Dingell Bill meets these needs. A report most favorable to all provisions of the Bill.

Davis, Michael M., Editor. "MEDICAL CARE FOR A HUNDRED MILLION PEOPLE." Medical Care, Vol.3, No.3. pp. 239-256. August, 1943. Summary of the Wagner-Murray-Dingell Bill followed by comments by Wagner, organized medicine, progressive physicians, and two dentists.

Davis, Michael M. and Mrs. Rose Ehrlich. "FOUR NATIONAL HEALTH BILLS COMPARED." Medical Care, Vol.3, No.4. pp. 331-339. November, 1943. Factual comparison of Wagner-Murray-Dingell Bill of 1943, Wagner Bill of 1939, Health Insurance Bill of 1935, and Canadian Health Act of 1943. No evaluation made.

de Kauif, Paul. KAISER WAKES THE DOCTORS. New York: Horcourt, Brace, and Co. 1943. P. 158. Describes and discusses very favorably in a popular style the group health care plans and ideas of Henry Kaiser.

Erikson, Carl A. "THE SMALL HOSPITAL". Hospitals, February, 1940. Discussion of housing and care of sick, centralization of the medical personnel, and the principles of construction. Plans for a number of hospitals are given and constructive criticism is made concerning them.

Faxon, N.W. "THE PLACE OF COMPELSION IN PREPAID HEALTH CARE". Hospitals, August, 1944. Favors the use of compulsory medical care plans to supplement voluntary insurance. Would accept the Wagner-Murray-Dingell Bill with reservations.

Hamilton, C. Horace. CONCLUSIONS AND PRINCIPLES OF THE FARM FOUNDATION CONFERENCE ON MEDICAL CARE AND HEALTH SERVICE IN RURAL AREAS. Raleigh, N.C.: North Carolina State College of Agriculture and Engineering. 1944. P.5. Mimeographed. Unofficial summary of conference held in Chicago April 11-13, 1944. Outlines present conditions in rural areas, the basic principles and objectives to be observed in drawing up medical care plans. Cites several practical plans and programs.

Hamilton, C. Horace. MEDICAL CARE NEEDS AND PLANS FOR RURAL PEOPLE IN NORTH CAROLINA. Raleigh, N.C.: North Carolina State College of Agriculture and Engineering. July, 1944. P.10. Mimeographed. Series of four newspaper articles discussing the need for group health care in rural areas, commercial and cooperative medical care plans, the Blue Cross plan, and federal public health insurance.

Hamilton, C. Horace. ELEMENTS OF A STATE MEDICAL CARE PLAN. Raleigh, N. C.: North Carolina State College of Agriculture and Engineering, 1944. P.7. Mimeographed. Outlines a state plan for public health insurance, showing need for federal aid.

Halbert, Blanche. HOSPITALS FOR RURAL COMMUNITIES. U.S.D.A. Farmers Bulletin No. 1792. P.41. Washington, D.C. November, 1937. This bulletin "gives information on hospital needs, size, cost, financing, and plans, based on the experiences of many localities."

Hellman, Richard. "THE FARMERS TRY GROUP MEDICINE" Harpers Magazine, Pp.1-8. December, 1940. Experience of the Farm Security Administration in providing for the health of rural people.

Hollingsworth, Helen and Margaret C. Klem. MEDICAL CARE AND COSTS IN RELATION TO FAMILY INCOME. Washington, D. C: Bureau of Research and Statistics. March, 1943. P. 219. Statistical source book including data on medical care expenditures and prevalence, incidence, severity, duration, and frequency of illness.

Johnson, Victor, John Peters, and Louis Wirth. "SHOULD WE ADOPT GOVERNMENT HEALTH INSURANCE?" The University of Chicago Round Table, No. 354. Pp.1-25. December 31, 1944. Radio discussion broadcast from the University of Chicago. Supplemented by several notes and charts.

Julius Rosenwald Fund. HOSPITAL FACILITIES IN RURAL AREAS. Chicago. 1935. P.28. Reprints of articles from Bulletin of the American Medical Association, The Commonwealth Fund, and The Modern Hospital. Concerned with need for hospitals in rural areas, principles to be considered in meeting needs, and plans for building small rural hospitals.

Kleinschmidt, L.S. "HOW CAN BETTER RURAL HEALTH BE DEVELOPED?" Rural Sociology, Vol.9, No.1. Pp. 21-27, March, 1944. Discusses present health conditions in rural areas and the need for improvements. Lists questions to be answered in studies of the problem.

Klem, Margaret C. PREPAYMENT MEDICAL CARE ORGANIZATIONS. Washington, D.C: Bureau of Research and Statistics. June, 1944. Pp. x + 130. Digest of prepayment plans now in use in the United States and Canada. Statistical summary showing number of persons eligible for care under existing plans and personnel associated with these organizations. Also more detailed information showing specific services received. Data given by census region, state, and type of organization.

Liebeler, Virginia M. "HOW THE BLUE CROSS CAME TO RURAL AMERICA." The Modern Hospital, February, 1944. Story of the enrollment in the Blue Cross plan of rural people in Minnesota. Difficulties involved in enlisting farmers in the plan and how they are being overcome.

N. C. Commission on Hospitals and Medical Care. MEDICAL CARE AND HOSPITAL FACILITIES FOR RURAL PEOPLE IN NORTH CAROLINA. Raleigh, N. C: October, 1944. P. 10. Mimeographed. Report of the Committee on Hospitals and Medical Care for Rural People. Summarizes needs of rural people in North Carolina and makes recommendations as to how these needs can be met. Other reports of the Commission are also available.

Physicians Forum, HOW'S YOUR HEALTH? New York: 1944. P. 8. A popular leaflet showing arguments for and giving enthusiastic endorsement to the plan for national prepaid health insurance, as is proposed in the Wagner-Murray-Dingell Bill. The Physicians Forum is an organized group of liberal doctors, headed by Ernst P. Boas, M.D. of Columbia University.

Porter, Amy. "DO WE WANT NATIONAL HEALTH INSURANCE?" Collier's, pp.20-21, 65-66. January 27, 1945. Arguments for and against the Wagner-Murray-Dingell Bill. Article recognizes need of some form of health insurance and is favorable toward compulsory national health legislation.

Rankin, W.S. et al. THE SMALL GENERAL HOSPITAL. The Duke Endowment Bulletin No. 3, P. 125. Charlotte, North Carolina. January, 1932. General principles of hospital planning. Also contains "more detailed information and designs adopted to the special interest and needs of building committees and technical groups, physicians, hospital consultants, and architects, who are more directly concerned with the planning, designing, and building of hospitals." Includes designs for three ideal small type hospitals as well as descriptions, photographs, and designs of ten hospitals recently built in North and South Carolina with the help of The Duke Endowment.

Ratcliff, J.D. "CO-OP HOSPITAL". Collier's. Pp. 24-26. July 31, 1943. Story of a successful cooperative community hospital in Elk City, Oklahoma.

Sarvis, Lewis J. and Graham L. Davis. "SOUTH HAVEN HOSPITAL: IT IS EFFICIENT AND EXPENDABLE." Hospitals. September, 1943. Comprehensive description of the South Haven hospital, including the architect's plans and a detailed statement of the cost of building and equipment.

Southmayd, Henry J. and Geddes Smith. SMALL COMMUNITY HOSPITALS. New York: The Commonwealth Fund. 1944. Pp x + 182. Includes discussions as to which communities should have hospitals, the area a hospital should serve, the administration and organization, distribution of the costs, and ways in which the hospital can aid the community getting better medical care.

United Electrical, Radio and Machine Workers of America-- CIO. UE GUIDE TO GROUP INSURANCE. New York: 1944. P. 127. Booklet "designed to help organizers and locals in negotiating group insurance." Discussion of the need for group insurance, concrete plans to be put into use, and some of the things every group insurance should include.

Warbasse, James Peter. COOPERATIVE MEDICINE. New York: The Cooperative League of the U.S.A. 1942. P. 42. Suggestions for setting up a cooperative health association in a community. Illustrations of such associations already in existence. Discussion of cooperative medicine as opposed to state medicine, stressing the advantages of the cooperative system. Sample set of by-laws, rules, and agreement with doctors.
